Physical Therapy Prescription for:

label

Diagnosis: ACL & MCL reconstruction

**Date of Surgery:** 

**Treatment:** See attached Rehabilitation Protocol

**Weight bearing status:** TTWB x 4 weeks, PWB starting at 4 weeks - increase 25% per week to 100% by week 7

## **Brace:**

First six weeks post-op:

- ACL hinged knee brace for weight bearing activities:
  - Locked when ambulating, unlocked when working on ROM (only when nonweight bearing)
  - o May unlock for ambulation as soon as quad control returns (no lag with SLR)
- > Brace range: 0 to 90 degrees
- ➤ Brace locked at 0 degrees for sleep for first 2 weeks (or longer if hasn't achieved symmetric terminal extension)

## Weeks 6 to 12:

➤ 1-2 week transition out of brace, provided good quad control

## Weeks 12 to 24:

- ➤ No brace needed
- > Focus on strengthening
- ➤ HAMSTRINGS!
- ➤ If cleared by therapist, ok to start a return to run program
- ➤ Alternate 10 min brisk walk 10 min jog 10 min brisk walk. Can increase jog portion each week by 2-3 minutes if tolerates well
- ➤ Will determine return to play clearance at week 24 (~ 6 months)

## Additional Instructions:

- > SEE ATTACHED PHYSICAL THERAPY PROTOCOL
- > Patella mobilizations important
- Scar massage beginning 3 weeks post-op
